

CVap[®] Transport Kit

If moving the unit throughout your facility is a constant, we recommend adding a transport kit. Most CVap equipment comes standard with 3" casters, to ease movement for cleaning. But if you need to shift your kitchen operations, a Transport Kit enhances your abilities. The transport package includes 5" heavy-duty swivel casters (two locking), evaporator cover, push-pull handles, cord wrap, and drain ball valve. CVap helps you roll on.

CORD WRAP

Keep your cord safely out of the way while moving the cabinet.

TRANSPORT PACKAGES

Transport Packages can be added to nearly every CVap model.

EVAPORATOR COVER

No need to drain the unit before moving – the evaporator cover will minimize water splashing out.

PERIMETER BUMPERS

Perimeter bumpers help protect your cabinet from collisions, and ensure spacing between your unit and other cabinets or walls.

HEAVY-DUTY CASTERS

Swivel casters make it easy to turn on a dime. Big 5" wheels make it easy to move, even on uneven surfaces. Two locking wheels keep the unit in place when it's not on the go.

**Push-pull handle not included with Pass Through units*
