

# The Best Choice Isn't Always the Most Expensive

Crunch the numbers.  
Combi ovens usually aren't  
the best option.

Yup, combis are ass-kicking ovens. They're hella fast, and crank out crazy power. But they cost money out the wazoo. Add in maintenance costs and you're looking at a boatload of money for an oven that's rarely used up to its full potential.

To say CVap RTV Ovens are just as good as combis is a bit of a stretch. RTVs have a 350°F max temp, so there are some cooking processes that combis do better. But when you consider everything RTVs do just as well as combis, at a much lower cost, the choice gets easier.

## Why are CVap RTV Ovens a Better Option?

- Half the upfront cost of combis
- Cheaper parts
- Made in USA
- No vent hood required
- Versatile - steam, bake, retherm, high-yield, hold, sous vide, and more
- Doesn't have to be plumbed
- Better energy efficiency
- No costly chemicals or filters - save up to \$3,000 annually
