

It's **All About** the **Benjamins**

Choosing CVap® RTV Ovens over combis means money in your pocket.

There's no denying it - combi ovens are great machines. They're fast and versatile. But they come with a big sticker shock, not to mention how expensive they are to maintain. You're looking at a boatload of money for an oven that often isn't used up to its full potential.

To say CVap RTV Ovens are just as good as combis is a bit of a stretch. RTVs have a 350°F max temp, so there are some cooking processes that combis do better. But when you consider everything RTVs do just as well as combis, at a much lower cost, the choice gets easier.

Why are CVap RTV Ovens a Better Option?

- 5-year warranty for schools
- Half the upfront cost of combis
- Cheaper parts
- Made in USA
- No vent hood required
- Versatile - steam, bake, retherm, high-yield, hold, and more
- Doesn't have to be plumbed
- Better energy efficiency
- No costly chemicals or filters - save up to \$3,000 annually
