

HBB Control Board Differences

Current Control Board (released September 2023)

Display

Icon Indicators
Indicates if heaters are on or if filling with water.

Icon Indicators
Indicates if unit is in menu mode, if volume is muted, or if there is an error code.

Back
Used to navigate back within setting menus.

Menu
Press & hold for three seconds to access menu.

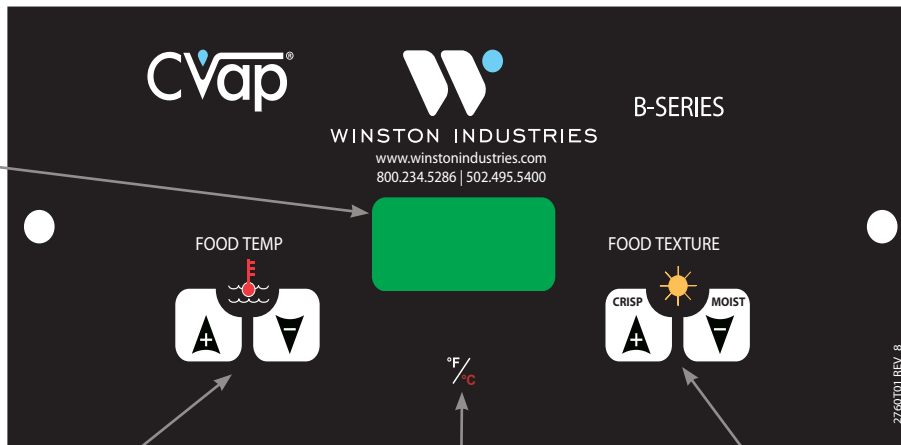

Enter
Used to make menu selections.

Vapor Temperature Control
Used to set the unit water temperature. This setting replaces **Food Temp** on previous controls.

Air Temperature Control
Used to set the unit air temperature. This setting replaces **Food Texture** on previous controls. The air temperature is the unit overall temperature.
Current Controller: Water Temp **150** + Air Temperature **164** = **164** overall temperature
Legacy Controller: Food Temp **150** + Food Texture **+14** = **164** overall temperature

Legacy Control Board (prior to September 2023)

Display
Displays Temperature & Error codes.

Food Temp
Sets evaporator temperature to control food temp. 90-200° F (32-93° C)

Temperature
Toggle between Fahrenheit and Celsius.

Food Texture
Changes the value of the food texture (temperature increase above the food temp setting).
